

COMPANY PROFILE

THE COMPANY

adesso is one of the leading independent IT service providers in the German-speaking world. The company specialises in consulting and tailored development of software for core business processes and public authorities. adesso's strategy has three pillars: extensive industry knowledge of its employees; comprehensive technological competence, regardless of the software manufacturer; and tried-and-tested methods for the implementation of software projects. That results in IT solutions that allow companies to become more competitive. Our core industries include automotive, banking and financial services, healthcare, insurance/reinsurance, life science, lottery, utilities, manufacturing industry, exhibition corporations, public administration, public transportation and retail. adesso was established in 1997. With more than 9.000 employees and an annual sales of EUR 900,25 million in 2022, adesso Group is one of the largest German IT service providers.

FROM THE INITIAL VISION TO DAY-TO-DAY BUSINESS

Our focus is the design and implementation of IT-supported business models and processes, the creation of modern applications for the optimisation of our customers' core business and support of their IT operations. This range of services is divided into a number of elements that offer the customer individual process entry points, depending on the requirements of a project:

BUSINESS CONSULTING - FROM STRATEGY TO PROCESS

Thanks to our extensive industry experience, we see ourselves as more than just an implementation service provider – we also offer face-to-face consultancy services. We work with our customers to develop business models and strategies and develop resilient commercial plans. Then we model processes to guarantee that strategic plans can be implemented in practice.

IT CONSULTING - FROM PROCESS TO ARCHITECTURE

Our IT consulting services close the gap between business processes and IT solutions. A multi-stage system, from process modelling and requirement engineering to the creation of software architecture, ensures that the resulting product optimally meets the needs of the customer.

SOFTWARE DEVELOPMENT - FROM ARCHITECTURE TO APPLICATION

The core of our software development activities is the realisation of tailored solutions that fulfil needs that cannot be met by standard software. Our range of services includes the integration and customisation of standard products and existing systems. We are equally experienced in the design, development and consolidation of complex portal environments as in the production of high-quality web applications.

IT MANAGEMENT - FROM APPLICATION TO OPERATION

We see the optimisation of IT operations and the reduction of costs through the flawless implementation of IT sourcing and consolidation strategies as essential elements of holistic IT management support. We support our customers in the organisation of their IT processes and with our market-leading range of IT service products. We can also take on responsibility for the operation of IT systems, whether they were developed by us or purchased from third party developers. Where required, that includes the hosting of applications and extends to all levels of IT architecture.

SOLUTIONS - SOPHISTICATED SOFTWARE ELEMENTS FOR TYPICAL TASKS

In addition to our core project and service business, we offer highly standardised products for typical tasks. Our consultants and developers use a set of methods that include target-oriented practices and efficient tool support in all their activities.
